80/20 - Nickel-iron layers of 300 to 800 Å thickness
were annealed to various bases at temperatures be-
tween 200 and 400°C. For all layers, there was a uni-
form relationship between layer thickness, anisotropic
field strength and kinetic field strengths of the wall for
re-magnetization in the easy and heavy directions.
Theoretical considerations were made with respect to
the effect of thickness, magnetization, exchange con-
